3.4 logistic regression on separable data, batch GD, $\eta = 1/L$, 10^5 iterations
(i) weight norm
(ii) in-sample cross-entropy
(iii) change of direction
$\|w_t\|$
$E_{in}(w_t)$ (unpenalized)
angle(w_t, w_{t+1000}) (degrees)
iteration t
$\lambda = 0$
$\lambda = 0.001$
$\lambda = 0.001$ (exactly 0 from t = 933)
