3.5 breast cancer, L2-regularized logistic regression, malignant = positive
3.5(a) ROC on the test set
true positive rate (recall)
false positive rate
test ROC, AUC = 0.994
3.5(b) threshold choice on the validation split
score
threshold t on $\theta(w^T x)$
validation recall
validation precision
t* = 0.105 (recall ≥ 0.98)
t = 0.5
